

## PRO-STAMP & PRO-LINER

### HOW DOES PRO-STAMP AND PRO-LINER NEEDLING WORK?

This treatment causes controlled micro inflammation to the skin which activates the body's natural healing response to promote blood circulation, deliver nutrients and oxygen to the skin and initiates new cell growth. Pro-stamp rejuvenates the skin and produces collagen leaving the skin nourished, oxygenation and restructured from the inside out, all without destroying the epidermis. Our Pro-liner treatment actually works precisely within the wrinkle or scar to plump up the skin from the inside out. These treatments can be done separately or combined together.

### CONTINUED REJUVENATION FOR UP TO 12 MONTHS

The most important factor when rejuvenating the skin is to balance cell function. This allows us to achieve smooth, plump, firm, evenly pigmented skin. Ideal skin rejuvenation needs to target 3 key cells and regulate their function:

1. Keratinocytes (improve skin smoothness)
2. Melanocytes (production of pigment)
3. Activation of fibroblasts (production of collagen and elastin)

It is also important to improve integrity of the epidermis (outer most layer of the skin) which most treatments don't do. The epidermis plays an important role in providing a natural barrier against toxins, bacteria and environmental influences. It makes no sense to compromise or damage it in any way.

### PRO STAMP IS THE ONLY TREATMENT THAT RESPECTS ALL 3 MAIN TARGET CELL TYPES!

### Can all skin types be treated?

Yes, Pro-stamp and Pro-liner is safe for all skin types. There is very low to no risk of injury or hyperpigmentation to the skin. This treatment is also safe for most skin colours.

### What areas of the skin can be treated?

This treatment can be performed on any areas of the face or body. Some popular areas may include:

- Around the eyes
- Forehead
- Cheeks
- Lips
- Nose
- Neck and jowls
- Chin
- Décolletage (Chest)
- Stomach / Hips
- Breasts
- Arms
- Legs
- Back

### **How much time does it take to recover from Pro-stamp and Pro-liner?**

- Pro-stamp: immediately after treatment the skin will look red and flushed like mild sunburn. The skin will feel tight and dry and can also appear slightly puffy. The skin will appear pink for 1-2 days. Most clients can return to work within 24 hours of treatment. Your skin may become dry and flaky on day 3-6. You will need to come in for a follow up treatment on day 5 to 7. By day 7 very few signs of treatment are visible in most clients.
- Pro liner: Day 1 and 2 the treated area may be slightly swollen, tender, red or bruised. The treated tissue may exhibit the appearance of a "cat scratch". Day 3 the area may slightly crust or flake and remain faintly pink to red. Day 4 the redness will start to diminish as the skin is healing. Day 5-7 the skin will look mostly normal (some clients will experience slight pinkness of the area for up to 6 weeks, this can be covered with makeup from day 2 onwards).

After the skin has shed it has a healthy glow, feels softer, smoother and is more even in colour, **the Rejuvenation and plumping starts and continues for up to 12 months after treatment.**

### **Contraindications (This treatment is not suitable for the following clients who fit the following):**

- use of Roaccutane in the last 6 months
- active dermatitis or skin infections in the area to be treated
- pregnancy/breastfeeding
- keloid scarring
- blood thinning medications
- Fitzpatrick skin tone V to VI
- Epileptic
- Porphyria (blood disorder)
- Blood clotting or wound healing problems
- Sunburn
- **Doctors clearance required** for high blood pressure, diabetes, abnormal heart condition, blood disorders, auto immune diseases, pacemaker
- Active herpes simplex – if you suffer from cold sores anti-viral medication is required before treatment
  
- Fish oils, vitamin E, aspirin and any other blood thinning vitamins should be avoided 1-week pre-treatment
- Active skin care such as retinols, acids should be avoided for 2 weeks pre-treatment
- Prescription retinols (Vitamin A) should be avoided for 4 weeks pre-treatment

### **Post Treatment:**

Mineral makeup can be worn from day 2. We have a medicated, cosmeceutical makeup available for purchase that can be worn the next day, but we strongly recommend keeping the face bare for at least 48 hours

Avoid exercise for the first 5 days as this can cause too much inflammation to the skin

No sun on the area for a minimum of 2 weeks and apply 50+ sunscreen for the next 4-6 weeks

Avoid swimming for the first 48 hours

Avoid active products until the skin has healed completely

**Consultations are required before booking your first Pro-Stamp or Pro-Liner treatment**

## MICRO-NEEDLING

VS.

## PRO-STAMP & PRO-LINER

- More superficial needling
- Causes micro tears in the epidermis due to dragging
- Skin rejuvenation
- Better for fine lines
- Improves pigmentation
- Improves light scarring
- Collagen production
- Superficial Reduction of pore size
- This type of needling is more suited to younger clients who don't have many skin concerns or conditions. Treating the skin with **Micro-needling** over and over regularly as the results are not long lasting can eventually cause micro scarring on the skin, this will present as smooth shiny skin.
- When treating wrinkles, it is important to get the needles to penetrate the 'floor' of the wrinkle, or the deepest part of the wrinkle in order to get plumping and rejuvenation, this is almost impossible with the **Micro-needling** device as you cannot treat deep enough or with enough precision to successfully plump the wrinkles.

- Most advanced skin needling treatment and device available
- Less trauma to the skin compared to micro-needling (does not damage or tear the epidermis – instead stimulates cell communication to repair and improve the skin)
- Less pain
- Reduces and fills Deeper wrinkles
- Reduces and improves Acne Scarring included pitted acne Scars
- Breaks down and reforms Scar tissue Relaxes, reduces and re-pigments scarring (cosmetic, surgical, injuries, piercings)
- Cellulite & Stretch Marks
- Improves Skin Texture
- Improves Pigmentation and evens skin tone
- Reduces larger pores
- Tightening sagging jowl's, necks, underarms and breast tissue
- Collagen production
- Normalises melanocytes (prevents pigmentation)
- Normalises oil secretion
- Stimulates hair regrowth
- Increased blood flow – increased oxygen and nutrients to the skin
- Can treat vascular conditions such as rosacea as our stamping device bypasses the epidermis and targets the dermis with no trauma

**If you have any further questions about this treatment, please don't hesitate to contact us:**
